ART 75
Reading #2

Augmented reality or as most call it AR is one of the biggest technology trends currently. And with having smartphones in the palms of our hands AR is quickly becoming more and more accessible to use. While virtual reality or as most call it VR is a computer-generated for us, humans, to interact with. While AR, on the other hand, is just our normal everyday environment with just add pieces of Augmented reality in it instead.

One of the newer AR apps that has been presented other than Pokemon Go and Real Strike is Five Nights at Freddies Special Delivery. This game scans the whole room that you are inside and bases the gameplay on your environmental surroundings which are highly interesting. Because now we are fighting scary animatronics anywhere from the bathrooms, to the classrooms, and even the bedrooms. This app demonstrates the upcoming contemporary expression of technologies future in video games, apps, and more.
